GUIDANCE NOTE

Date: 11th September 2020

Unified Communications Troubleshooter Standard (ST0131):

KNOWLEDGE MODULE 1 EQUIVALENCIES

The Assessment Plan for this standard has a list of acceptable vendor/ professional qualifications that can be substituted for Knowledge Module 1.

MCP **Windows Server 2012** is the vendor /professional qualification listed on the Assessment Plan. However, Microsoft also has **Windows Server 2016** certification exams now available.

We are confident that Windows Server 2016 learning objectives align with the Knowledge Module 1 and allow the same or similar inferences to be drawn about knowledge attainment. As a result, employers wanting to access Windows Server 2016 exams, are able to use either of the following as replacements for KM1:

- **70 – 740: Installation, Storage, and Computer with Windows Server 2016**
- **70 – 742: Identity with Windows Server 2016**
